Seven mistakes you've probably made at some point when processing data

18. 5. 2016 at 3 pm

We all make mistakes. But when it comes to statistics, we often don't even know we're making them. We are, therefore, going to have a look at seven statistical mistakes that can be frequently seen among scientists; concerning experimental design, data processing and presentation, and testing of hypotheses.

About JC: The goals of Journal Club are manifold. Primarily, it serves as a forum where every member of our Biomedical Center can present the latest results from his field and specialization in a way that is accessible to her/his colleagues. The first language of JC's is English. Additionally, it serves as a place to present results from own research and to train presentations. We would like to stimulate discussion across multiple scientific fields in order to reach wider and deeper insight of contemporary development of science. Researchers from outside of the center are welcomed to participate and/or to present their own topics. Please, do not hesitate to come or to contact us. Organizers: J. Kroc, L. Vistejnova and P. Klein.
